DETAILED ACTION

1. Claims 13 and 14 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Election was made without traverse in Paper No. 5.

2. Applicant's election of group I, claims 1-12, and the particular species recited in claim 5 in Paper No. 5 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claims 13 and 14 would be rejoined if the composition claims were found allowable.

Rejections 35 U.S.C. 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-12 rejected under 35 U.S.C. 103(a) as being unpatentable over Grewal et al. (US 6,093,724)
- 5. Grewal et al. teaches an analgesic pharmaceutical composition comprising the azatricyclic compound herein and a pharmaceutical acceptable carrier. See, particularly, the abstract, and the claims.
- 6. Grewal et al. does not teach expressly a pharmaceutical composition comprising a combination of the azatricyclic compound herein and another known analgesics, such as NSAIDs, or opioid analgesics herein listed.

Art Unit: 1617

However, it would have been prima facie obvious to a person of ordinary skill in the art, at the time the claimed the invention was made, to make a combination of the azatricyclic compound herein with other known analgesics.

A person of ordinary skill in the art would have been motivated to make a combination of the azatricyclic compound herein with other known analgesics because it is prima facie obvious to combine two compositions each of which is taught in the prior art to be useful for same purpose in order to form third composition that is to be used for very the same purpose; idea of combining them flows logically from their having been individually taught in prior art; thus, the claimed invention which is a combination of two known analgesics sets forth prima facie obvious subject matter. See <u>In re Kerkhoven</u>, 205 USPQ 1069.

Allowable subject Matters

A pharmaceutical composition comprising an analgesic effective amount of a synergistic combination of 4-s-[4-(propylsulfanyl)-1, 2, 5-thiadiazol-3yl]-1-azatricyclo[3,3,1,1<3,7>]decane hydrochloride and a non-steroidal anti-inflammatory drug.

A pharmaceutical composition comprising an analgesic effective amount of a synergistic combination of 4-s-[4-(propylsulfanyl)-1, 2, 5-thiadiazol-3yl]-1-azatricyclo[3,3,1,1<3,7>]decane hydrochloride and morphine.

The above subject matters are allowable because of the evidences in the specification (pages 9-18) show unexpected synergistic effect of the combinations. However, the specification does not provide sufficient evidence in supporting the extrapolation of such unexpected results beyond the scope defined above.
